

VC View

The Comprehensive Solution for Hosting 3D City Models

Use our turnkey web application to visualize your geodata in all dimensions.

More and more administrations are interested in publishing their geodata. As experts in web visualizations of geodata, we offer VC View, a smart way to bring geodata to life on all terminal devices. Most importantly, VC View makes the geodata available across workstations, independent of location and at any time, without administrative barriers.

What our customers particularly appreciate

Service

Our team always has a sympathetic ear for your questions and ideas and supports you in achieving your goals.

Ticket system

Change requests or problems can easily be reported via our support address. We will take care of your needs.

Partner network

Take advantage of short paths and coordinated processes between our partners and us to quickly and smoothly implement your project.

virtual city systems
digital views. real perspectives.

You give us your data – we do the rest.

We help you create your own VC Database, convert the input data, configure the application individually and make the application available on a turnkey basis using the basic technology of the VC Map. We can incorporate the following data formats:

- Digital terrain model
- Orthophoto
- Oblique aerial view
- CityGML data (textured and untextured)
- 3D measurement models in Cesium 3D Tiles format
- Point clouds

You do not have any data yet? We can help with that, too.

We maintain long-standing partnerships with aerial survey experts who provide our team of visualization specialists with accurate and valid data. Due to the intensive coordination, all parties involved benefit and you always remain informed about the current status of the process.

The complete service package includes:

- ▶ Hosting based on VC Map technology
- ▶ Runs on servers hosted by Amazon Web Service, server location Frankfurt
- ▶ Customization of design, imprint, privacy, and copyright notice
- ▶ Application runs in all modern web browsers
- ▶ Securing the application via login or IP addresses
- ▶ Includes updates and security patches
- ▶ Integration of services and add-ons

The following services can be integrated:

- Web Map Services (WMS)
- Web Map Tile Services (WMTS)
- Web Feature Services (WFS)

The following add-ons can be integrated:

- VC Planner
- VC Warehouse

Another exciting product that might interest you:

VC Planner

Creating and integrating urban designs in the context of the surrounding development can be achieved easily, quickly and with only one software solution – VC Planner. Plan your designs directly within your 3D city model for collaborative work and vivid presentations.

Do you have questions about this product or our company? We will be happy to advise you.
